

Economic background – a commentary from Arlingclose

Economic background:

After spiking at over \$85/barrel in October 2018, oil prices fell back sharply by the end of the year, declining to just over \$50 in late December before steadily climbing toward \$70 in April 2019. UK Consumer Price Inflation (CPI) for February 2019 was up 1.9% year/year, just above the consensus forecast but broadly in line with the Bank of England's February Inflation Report. The most recent labour market data for the three months to January 2019 showed the unemployment rate fell to a new low 3.9% while the employment rate of 76.1% was the highest on record. The 3-month average annual growth rate for pay excluding bonuses was 3.4% as wages continue to rise steadily and provide some upward pressure on general inflation. Once adjusted for inflation, real wages were up 1.4%.

After rising to 0.6% in the third calendar quarter from 0.4% in the second, fourth quarter economic growth slowed to 0.2% as weaker expansion in production, construction and services dragged on overall activity. Annual GDP growth at 1.4% continues to remain below trend. Following the Bank of England's decision to increase Bank Rate to 0.75% in August, no changes to monetary policy have been made since.

The US Federal Reserve continued its tightening bias throughout 2018, pushing rates to the 2.25%-2.50% range in December. However, a recent softening in US data caused the Fed to signal a pause in hiking interest rates at the last Federal Open Market Committee (FOMC) meeting in March.

With the 29th March 2019, the original EU 'exit day' now been and gone, having failed to pass a number of meaningful votes in Parliament, including shooting down Theresa May's deal for the third time, MPs voted by a majority of one (313 to 312) to force the prime minister to ask for an extension to the Brexit process beyond 12th April in order to avoid a no-deal scenario. Recent talks between the Conservative and Labour parties to try to reach common ground on a deal which may pass a vote by MPs have yet to yield any positive results. The EU must grant any extension and its leaders have been clear that the terms of the deal are not up for further negotiation. The ongoing uncertainty continues to weigh on sterling and UK markets.

While the domestic focus has been on Brexit's potential impact on the UK economy, globally the first quarter of 2019 has been overshadowed by a gathering level of broader based economic uncertainty. The US continues to be set on a path of protectionist trade policies and tensions with China in particular, but with the potential for this to spill over into wider trade relationships, most notably with EU. The EU itself appeared to be show signs of a rapid slowdown in economic growth with the major engines of its economy, Germany and France, both suffering misfires from downturns in manufacturing alongside continued domestic/populist unrest in France. The International Monetary Fund downgraded its forecasts for global economic growth in 2019 and beyond as a consequence.

Financial markets:

December was a month to forget in terms of performance of riskier asset classes, most notably equities. The FTSE 100 (a good indicator of global corporate sentiment) returned - 8.8% assuming dividends were reinvested; in pure price terms it fell around 13%. However, since the beginning of 2019 markets have rallied, and the FTSE 100 and FTSE All share indices were both around 10% higher than at the end of 2018.

Gilt yields continued to display significant volatility over the period on the back of ongoing economic and political uncertainty in the UK and Europe. After rising in October, gilts regained their safe-haven status throughout December and into the new year - the 5-year benchmark gilt yield fell as low as 0.80% and there were similar falls in the 10-year and 20-year gilts over the same period dropping from 1.73% to 1.08% and from 1.90% to 1.55%. The increase in Bank Rate pushed up money markets rates over the year and 1-month, 3-month and 12-month LIBID (London Interbank Bid) rates averaged 0.53%, 0.67% and 0.94% respectively over the period.

Recent activity in the bond markets and PWLB interest rates highlight that weaker economic growth is not just a UK phenomenon but a global risk. During March the US yield curve inverted (10-year Treasury yields were lower than US 3 month money market rates) and German 10-year Bund yields turned negative. The drivers are a significant shift in global economic growth prospects and subsequent official interest rate expectations given its impact on inflation expectations. Further to this is world trade growth which collapsed at the end of 2018 falling by 1.8% year-on-year. A large proportion of this downturn in trade can be ascribed to the ongoing trade tensions between the US and China which despite some moderation in January does suggest that the International Monetary Fund's (IMF) and Organisation for Economic Co-Operation & Development's (OECD) forecasts for global growth in 2019 of 3.5% might need to be revised downwards.

Credit background:

Credit Default Swap (CDS) spreads drifted up towards the end of 2018 on the back of Brexit uncertainty before declining again in 2019 and continuing to remain low in historical terms. After hitting around 129 basis points in December 2018, the spread on non-ringfenced bank NatWest Markets plc fell back to around 96bps at the end of March, while for the ringfenced entity, National Westminster Bank plc, the CDS spread held relatively steady around 40bps. The other main UK banks, as yet not separated into ringfenced and non-ringfenced from a CDS perspective, traded between 33 and 79bps at the end of the period.

The ringfencing of the big four UK banks (Barclays, Bank of Scotland/Lloyds, HSBC and RBS/Natwest Bank plc) transferred their business lines into retail (ringfenced) and investment banking (non-ringfenced) entities.

In February, Fitch put the UK AA sovereign long-term rating on Rating Watch Negative as a result of Brexit uncertainty, following this move with the same treatment for UK banks and a number of government-related entities.

There were minimal other credit rating changes during the period. Moody's revised the outlook on Santander UK to positive from stable to reflect the bank's expected issuance plans which will provide additional protection for the its senior unsecured debt and deposits.
